### **Response to Amendment**

1. Based on applicant's amendment, filed 12/8/2009, see page 1 through 12 of the remarks, also telephone interview filed on December 13, 2009, with respect to cancellation of claims 1-9, 11 and 20-46, and amended claims 10, 12, 13 and 14, have been fully considered and are persuasive, upon further consideration the 35 USC 101 rejection and rejection of 102(b) and 103(a) for claims 10 and 12-19, are hereby withdrawn.

The claims 10 and 12-19 now renumbered as 1-9 are allowed.

### **EXAMINER'S AMENDMENT**

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it must be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Applicants Attorney (Mr. James W. Judge, Reg No. 42,701), on December 13, 2009, without traverse.

**Cancel claims 1-9, 11 and 20-46.**

### **REASONS FOR ALLOWANCE**

3. The following is an examiner's statement of reasons for allowance.

This invention relates generally, to increasing the amount of information by applying digital information carrier to the document displayed.

Based on applicant's amendment, with respect to claim 1 representative of claims 12-14 the closest prior art of record (Zhou and Kuwana), Zhou reference is directed to two-dimensional barcodes, and, more particularly, to a robust clock free two-dimensional barcode symbology, encoding information formatted in such barcode symbology, printing the barcode symbology onto a printed medium, and decoding the same, and Kuwana reference is directed to an NAND-circuit-type address decoder apparatus for decoding address signals, more particularly to an address decoder apparatus composed of CMOS using P- and N-channel MISFETs, but neither Zhou nor Kuwana teach or suggest, among other things, "predetermine groupings thereof that interrelate by a clustering definition establishing clusters of said graphical objects and that thereby encode primary information at least identifying the placement of the clusters of said graphical objects within the entire pattern of said graphical objects on said surface, and to predetermine an arrangement of said graphical-object clusters relative to each other that encodes secondary information different from the primary information, said arrangement of said graphical-object clusters being assigned information relating either to coordinate axes for, or to the orientation of, an array of said graphical-object clusters, wherein: among a number  $d$  (wherein  $d > 4$ ) of said graphical-object clusters arranged consecutively, a number  $e$  of graphical-object clusters satisfying the condition  $e \leq d/2$  are arranged offset in a direction orthogonal to an arraying direction formed by the remaining number  $d - e$  of graphical-object clusters; and the information relating to the coordinate axes is assigned to the arraying direction, and the information relating to orientation is assigned to the offset".

These key features in combination with the other features of the claimed invention are neither taught nor suggested by (Zhou and Kuwana) prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue

fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
